

The background of the page features a large, abstract graphic. It consists of several thick, curved, brushstroke-like lines in shades of blue and red, sweeping from the top left towards the bottom right. The lines have a sense of motion and fluidity. The top of the page is a solid blue band.

Argireline Line- Expression Wrinkle Inhibitor Treatment

A BOTOX ALTERNATIVE

PROTOCOL

This innovative age-defying treatment features two scientifically advanced biomimetic peptides, that work in unique combination to prevent lean muscle contractions for a visible reduction in expression wrinkles, and with outstanding restorative power:

Argireline and Myoxinol.

The treatment focuses on muscles responsible for wrinkles. The skin is restored and restructured.

Argireline inhibits the reactions that cause muscles to move or contract - for example when forming facial expressions such as smiling or frowning. Repetitive muscle movements create lines and wrinkles and the attenuation of muscular contractions can reduce the depth of existing wrinkles and prevent the formation of new lines.

Myoxinol – a botox-like active obtained from hibiscus flowers, is claimed to work biologically to retard the ageing of cells (anti-radically) and mechanically to inhibit facial muscle contraction, preventing the formation of horizontal and vertical frown lines, crow's feet around the eyes and naso-labial lines around the mouth.

Product-by-product Range Overview

Argireline Botox - Like Cream	1C09P 200 ml	Provides rapid wrinkle reduction, while rebuilding skin at the deepest level. It immediately increases hydration within the skin to plump fine lines and wrinkles, and encourages the production of collagen and elastin. Argireline assists in relaxation of the intensity and frequency of facial muscle contractions. The result of this action is a “lifting” feeling.
Myoxinol Botox - Like Peel-off Mask	1H26 400 g	Use of Myoxinol results in a significant reduction in muscle cell contractions, the primary mechanical factor responsible for the appearance of dynamic facial wrinkles. The contraction-inhibiting effect stop 24 hours after application.
Argireline & Botanical DNA Serum Botox - Like	1S09P 50 ml	Ageing and environmental factors cause our skin to produce less and less collagen. It is collagen that supports the structure of our skin, making it firm and resilient. Bleu & marine Serum with Argireline has the unique ability to stimulate collagen production, allowing your skin to regain lost vitality and slow the onset of further signs of ageing.

Main Ingredients: Chondroitin sulfate (obtained from fish cartilage), Retinol – Vitamin A, sunflower seed oil, Vitamin E, Laminaria algae, Argireline (acetyl hexapeptide-8), Wheat germs oil, botanical DNA, Hibiscus extract (myoxinol).
